New User Stories:

- As a user, I would like to be able to make queries in a web-based application.
- As a user, I would like to have curl or postman be used.
- As a manager, I want instructions on the URL format of the web based application.
- As an operator, I want to be able to run queries on this web application without issues.

What we plan to deliver:

We plan to expand on our current product and add a web-based application that can be queried. This application will not focus on the front end (i.e. it will not look pretty), but it will function on the backend and will be tested. We are leaning towards using Postman instead of cURL because of the functionality that Postman can have.
